Serenity Services and APIs: Overview

There are many services that expose [APIs](#) across the Serenity IoT Platform. This section describes the services, APIs, and how to use them.

Platform Services

This section provides reference information for the Serenity APIs. They conform to the [OpenAPI Specification](#). These services are exposed and can be used for system integration.

Identity Gateway	Authorization gateway service
IoTHub Manager	Manage Azure IoT Hub and devices
Tenant Manager	Tenant management and alerting services
Device Telemetry	
Config	
Diagnostics	

To learn how to use the [Swagger UI](#) to interact with these services. [click here](#). To learn how to work with these services using other techniques, [click here](#).

Application Services

These services are only accessible from within the platform. It's possible to contribute to directly to the platform and use these services from within. But these services are not available for external consumption and don't have swagger references.

ASA Manager	Data formatting service
Storage Adapter	Storage service

Azure Services

The Serenity IoT Platform uses several Azure Services. Here is documentation about the services and their APIs.

API DOCUMENTATION	PRODUCT DOCUMENTATION
IoT Hub API	IoT Hub Docs
IoT Hub Device Provisioning	DPS Docs
Data Lake Storage API	Data Lake Docs

API DOCUMENTATION	PRODUCT DOCUMENTATION
Cosmos DB API	Cosmos DB Docs
Key Vault API	Key Vault API
Stream Analytics API	Stream Analytics Docs
Time Series Insights API	Time Series Insights Docs
Identity Management (B2C) API	B2C Docs
Blob Storage API	Blob Storage Docs
Table Storage API	Table Storage Docs

Serenity Authorization Flow

Request headers

All API calls must include the following request headers

HEADER	VALUE
Authorization	Bearer {token}.
Content-Type	application/json

Serenity and Swagger UI

Each Serenity web service has a Swagger UI that allows you to visualize and interact with the Serenity APIs.

Swagger Paths

Each Serenity web service has a specific path that exposes an interactive Swagger UI to the APIs as follows:

SERVICE	PATH
Identity Gateway	auth/index.html
Config	config/index.html
Device Telemetry	telemetry/index.html
Diagnostics	diagnostics/index.html
IoTHub Manager	iothubmanager/index.html
Tenant Manager	tenantmanager/index.html

Using Swagger UI

To access the Swagger UI, append the *path* to the *platform-url* using the following syntax:

```
https://{platform-url}/{Swagger Path}
```

For example, the following will take you to the Identity Gateway in CRSL's Development environment:

```
https://crslot-aks-dev.centralus.cloudapp.azure.com/iothubmanager/index.html
```

Additional Details

For additional information on Swagger UI, check out the [Swagger UI Documentation](#)

Prerequisites for working with APIs

How to call Serenity REST with Postman

Check out: <https://docs.microsoft.com/en-us/rest/api/azure/#how-to-call-azure-rest-apis-with-postman>

Identity Gateway Service REST API

The Identity Gateway service is used to authenticate and manage users.

Within each Serenity Instance an interactive Swagger UI is available at the following path
`https://{platform-url}/auth/index.html` For more information about Swagger UI, [click here](#).

REST operation groups

The Identity Gateway service REST API provides operations for working with the following:

OPERATION GROUP	DESCRIPTION
Authorize	Log in or out and context operations.
Configuration	
SystemAdmin	
UserSettings	
UserTenant	
Status	

Authorize

Service: Identity Gateway

Operations

Authorize	Authorizes user and redirects to callback
Logout	Returns to the redirect url passed on successful logout
Token	Returns JWT token matching claim
Tenant	Used to switch tenants
Callback	Called by B2C to redirect

Authorize - Authorize

Service: Identity Gateway

Authorizes user through configured Authorization Provider.

GET https://{platform-url}/connect/authorize

URI Parameters

NAME	REQUIRED	TYPE	DESCRIPTION
redirect_uri	?	string	?
state	?	string	?
client_id	?	string	?
nonce	?	string	?
tenant	?	string	?
invite	?	string	?

Responses

NAME	TYPE	DESCRIPTION
200 OK		

Authorize - Token

Service: Identity Gateway

Returns JWT token matching claim. Used by user registration to convert and invited user to a enrolled user.

```
POST https://{platform-url}/connect/token
```

Request headers

HEADER	VALUE
Content-Type	application/json

Request Body

In the request body, supply a JSON representation of ClientCredentialInput object:

NAME	REQUIRED	TYPE	DESCRIPTION
client_id	true	string	Name of the user
client_secret	true	string	Current status of the user: Invited or Member
scope	true	string	Role of the user i.e., admin, readonly, contributor

Responses

NAME	TYPE	DESCRIPTION
200 OK		

Examples

{Description of example}

Sample Request

```
POST https://{platform-url}/connect/token
```

Sample Body

```
{"client_id":"95d3c562-23eb-4e2d-8d3d-ea2448706934","client_secret":"SH90ZgTR-MT0bGLb0/u[7qIc-MP0vtAs"]}
```

Sample Response

Authorize - Logout

Service: Identity Gateway

Returns to the redirect url passed on successful logout.

Http Request

```
GET https://{platform-url}/connect/logout?post_logout_redirect_uri={redirectUrl}
```

Request headers

HEADER	VALUE
Content-Type	application/json

Request Body

In the request body, supply a JSON representation of ClientCredentialInput object:

NAME	REQUIRED	TYPE	DESCRIPTION
post_logout_redirect_uri	true	string	URI to redirect to on logout.

Responses

NAME	TYPE	DESCRIPTION
200 OK	TODO: Response Object	

Definitions

TODO: Add Response Objects from above

Examples

Log out of CRSL Dev

```
GET https://{platform-url}/connect/logout?post_logout_redirect_uri=https://crsliot-aks-dev.centralus.cloudapp.azure.com/
```

Authorize - Tenant

Service: Identity Gateway

Used to switch tenants

```
POST https://{platform-url}/connect/switch/{tenantId}
```

Request headers

HEADER	VALUE
Content-Type	application/json

Responses

NAME	TYPE	DESCRIPTION
200 OK		

Examples

Tenant Switch Example

```
POST https://{platform-url}/connect/switch/233a1ca2-6855-43c5-8b9c-c7f85a1dd520
```

POST Connect Callback

This Method executes the callback method

Http Request

POST https://{platform-url}/connect/callback

Request headers

HEADER	VALUE
Content-Type	application/json

Responses

NAME	TYPE	DESCRIPTION
200 OK	TODO: Response Object	

Sample Request

Request Body

Below are the details to be sent as part of form body.

```
state
id_token
error
error_description
```

Response

200 Response

Configuration

Service: Identity Gateway

Operations

openid configuration	Get Open Id Configuration
openid configuration jwks	Get JSON web keys

Configuration - OpenID Configuration

Service: Identity Gateway

This Method returns the open ID Provider Configuration.

```
GET https://{platform-url}/.well-known/openid-configuration
```

Permissions

ReadAll permission is required to call this api.

Request headers

HEADER	VALUE
Content-Type	application/json

Responses

NAME	TYPE	DESCRIPTION
200 OK	TODO: Response Object	

Definitions

Response Object 1

```

Operations

Config

Config service is used to deal with Packages, Device groups, Configuration types, Solution Settings and User Settings

Within each Serenity Instance an interactive Swagger UI is available at the following path `/auth/index.html` For more information, [click here](#).

REST operation groups

The Config service REST API provides operations for working with the following:

OPERATION GROUP	DESCRIPTION
Config Types	Operations to manage Config types
Devicegroup	Manage Device groups
Packages	Manage Packages
Seed	Deals with device simulation and templates
Solution Settings	Manages Solution settings like Logo, theme etc.,
Status	Health Status operations of the service
User Settings	Manage User Settings

Config Types

Service: Config

Operations

OPERATION	DESCRIPTION
Get All Config Types	Fetches all Config types

Get All Config Types

API that fetches all the config types.

Permissions

- ReadAll

Http Request

GET /config/v1/configtypes

Request headers

HEADER	VALUE
Authorization	Bearer {token}. Required.
Content-Type	application/json

Request Body

N/A

Response Schema

```
{
  "configTypes": [
    "string"
  ],
  "metadata": {
    "additionalProp1": "string",
    "additionalProp2": "string",
    "additionalProp3": "string"
  }
}
```

Sample Response

```
{
  "Items": [
    "Firmware",
    "Custom - 1"
  ],
  "$metadata": {
    "$type": "DevicePropertyList;1",
    "$url": "/v1/deviceproperties"
  }
}
```

Security

Type: OpenID Connect

Flow: implicit

Authorization URL: <https://login.microsoftonline.com/crsltestab2c.onmicrosoft.com>

Device Group

Service: Config

Operations

OPERATION	DESCRIPTION
Get All Device Groups	Fetches all Device groups
Get Device Group	Fetches Device group by ID
Create Device Group	Creates Device group
Update Device Group	Updates Device group
Delete Device Group	Deletes Device group

Get All Device Groups

API that fetches all the Device groups.

Permissions

- ReadAll

Http Request

GET /config/v1/devicegroups

DeviceGroupController

Namespace: [Mmm.Iot.Config.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class DeviceGroupController : Controller
```

Constructors

DeviceGroupController(IStorage)

Declaration

```
public DeviceGroupController(IStorage storage)
```

Parameters

TYPE	NAME	DESCRIPTION
IStorage	storage	

Methods

CreateAsync(DeviceGroupApiModel)

Declaration

```
public Task<DeviceGroupApiModel> CreateAsync(DeviceGroupApiModel input)
```

Parameters

TYPE	NAME	DESCRIPTION
DeviceGroupApiModel	input	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<DeviceGroupApiModel>	

DeleteAsync(String)

Declaration

```
public Task DeleteAsync(string id)
```

Parameters

TYPE	NAME	DESCRIPTION
System.String	id	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task	

GetAllAsync()

Declaration

```
public Task<DeviceGroupListApiModel> GetAllAsync()
```

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<DeviceGroupListApiModel>	

GetAsync(String)

Declaration

```
public Task<DeviceGroupApiModel> GetAsync(string id)
```

Parameters

TYPE	NAME	DESCRIPTION
System.String	id	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<DeviceGroupApiModel>	

UpdateAsync(String, DeviceGroupApiModel)

Declaration

```
public Task<DeviceGroupApiModel> UpdateAsync(string id, DeviceGroupApiModel input)
```

Parameters

TYPE	NAME	DESCRIPTION
System.String	id	
DeviceGroupApiModel	input	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<DeviceGroupApiModel>	

Class PackagesController

Inheritance

System.Object

PackagesController

Namespace: [Mmm.Iot.Config.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class PackagesController : Controller
```

Constructors

PackagesController(IStorage)

Declaration

```
public PackagesController(IStorage storage)
```

Parameters

TYPE	NAME	DESCRIPTION
IStorage	storage	

Fields

InactivePackageTag

Declaration

```
public const string InactivePackageTag = "reserved.inactive"
```

Field Value

TYPE	DESCRIPTION
System.String	

Methods

ActivatePackageAsync(String)

Declaration

```
public Task<ActionResult<PackageApiModel>> ActivatePackageAsync(string id)
```

Parameters

TYPE	NAME	DESCRIPTION
System.String	id	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<ActionResult<PackageApiModel>>	

AddTagAsync(String, String)

Declaration

```
public Task<ActionResult<PackageApiModel>> AddTagAsync(string id, string tag)
```

Parameters

TYPE	NAME	DESCRIPTION
System.String	id	
System.String	tag	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<ActionResult<PackageApiModel>>	

DeactivatePackageAsync(String)

Declaration

```
public Task<ActionResult<PackageApiModel>> DeactivatePackageAsync(string id)
```

Parameters

TYPE	NAME	DESCRIPTION
System.String	id	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<ActionResult<PackageApiModel>>	

DeleteAsync(String)

Declaration

```
public Task DeleteAsync(string id)
```

Parameters

TYPE	NAME	DESCRIPTION
System.String	id	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task	

GetAsync(String)

Declaration

```
public Task<PackageApiModel> GetAsync(string id)
```

Parameters

TYPE	NAME	DESCRIPTION
System.String	id	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<PackageApiModel>	

GetFilteredAsync(String, String, List<String>, String)

Declaration

```
public Task<PackageListApiModel> GetFilteredAsync(string packageType, string configType, List<string> tags, string tagOperator = "AND")
```

Parameters

TYPE	NAME	DESCRIPTION
System.String	packageType	
System.String	configType	
List<System.String>	tags	
System.String	tagOperator	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<PackageListApiModel>	

PostAsync(String, String, String, String, List<String>, IFormFile)

Declaration

```
public Task<PackageApiModel> PostAsync(string packageName, string packageType, string configType, string version, List<string> tags, IFormFile package)
```

Parameters

TYPE	NAME	DESCRIPTION
System.String	packageName	
System.String	packageType	
System.String	configType	

TYPE	NAME	DESCRIPTION
System.String	version	
List<System.String>	tags	
IFormFile	package	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<PackageApiModel>	

RemoveTagAsync(String, String)

Declaration

```
public Task<ActionResult<PackageApiModel>> RemoveTagAsync(string id, string tag)
```

Parameters

TYPE	NAME	DESCRIPTION
System.String	id	
System.String	tag	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<ActionResult<PackageApiModel>>	

RemoveTagsAsync(String)

Declaration

```
public Task<ActionResult<PackageApiModel>> RemoveTagsAsync(string id)
```

Parameters

TYPE	NAME	DESCRIPTION
System.String	id	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<ActionResult<PackageApiModel>>	

UploadFileAsync(IFormFile)

Declaration

```
public Task<UploadFileServiceModel> UploadFileAsync(IFormFile uploadedFile)
```

Parameters

TYPE	NAME	DESCRIPTION
IFormFile	uploadedFile	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<UploadFileServiceModel>	

Class SeedController

Inheritance

System.Object

SeedController

Namespace: [Mmm.Iot.Config.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class SeedController : Controller
```

Constructors

SeedController(ISeed)

Declaration

```
public SeedController(ISeed seed)
```

Parameters

TYPE	NAME	DESCRIPTION
ISeed	seed	

Methods

PostAsync()

Declaration

```
public Task PostAsync()
```

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task	

Class SolutionSettingsController

Inheritance

System.Object

SolutionSettingsController

Namespace: [Mmm.Iot.Config.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class SolutionSettingsController : Controller
```

Constructors

SolutionSettingsController(IStorage, IActions)

Declaration

```
public SolutionSettingsController(IStorage storage, IActions actions)
```

Parameters

TYPE	NAME	DESCRIPTION
IStorage	storage	
IActions	actions	

Methods

GetActionsSettingsAsync()

Declaration

```
public Task<ActionSettingsListApiModel> GetActionsSettingsAsync()
```

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<ActionSettingsListApiModel>	

GetDefaultFirmwareSettingAsync()

Declaration

```
public Task<DefaultFirmwareSettingApiModel> GetDefaultFirmwareSettingAsync()
```

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<DefaultFirmwareSettingApiModel>	

GetLogoAsync()

Declaration

```
public Task GetLogoAsync()
```

--

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task	

GetThemeAsync()

Declaration

public Task<Theme> GetThemeAsync()

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<Theme>	

SetDefaultFirmwareSettingAsync(DefaultFirmwareSettingApiModel)

Declaration

public Task<ValueApiModel> SetDefaultFirmwareSettingAsync(DefaultFirmwareSettingApiModel settingModel)

Parameters

TYPE	NAME	DESCRIPTION
DefaultFirmwareSettingApiModel	settingModel	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<ValueApiModel>	

SetLogoAsync()

Declaration

public Task SetLogoAsync()

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task	

SetThemeAsync(Theme)

Declaration

public Task<Theme> SetThemeAsync(Theme theme)

Parameters

TYPE	NAME	DESCRIPTION
Theme	theme	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<Theme>	

Class StatusController

Inheritance

System.Object
StatusController

Namespace: [Mmm.Iot.Config.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public sealed class StatusController : ControllerBase
```

Constructors

StatusController(IStatusService)

Declaration

```
public StatusController(IStatusService statusService)
```

Parameters

TYPE	NAME	DESCRIPTION
IStatusService	statusService	

Methods

GetAsync()

Declaration

```
public Task<StatusApiModel> GetAsync()
```

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<StatusApiModel>	

Ping()

Declaration

```
public IActionResult Ping()
```

Returns

TYPE	DESCRIPTION
IActionResult	

Class UserSettingsController

Inheritance

System.Object

UserSettingsController

Namespace: [Mmm.Iot.Config.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class UserSettingsController : Controller
```

Constructors

UserSettingsController(IStorage)

Declaration

```
public UserSettingsController(IStorage storage)
```

Parameters

TYPE	NAME	DESCRIPTION
IStorage	storage	

Methods

GetUserSettingAsync(String)

Declaration

```
public Task<object> GetUserSettingAsync(string id)
```

Parameters

TYPE	NAME	DESCRIPTION
System.String	id	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<System.Object>	

SetUserSettingAsync(String, Object)

Declaration

```
public Task<object> SetUserSettingAsync(string id, object setting)
```

Parameters

TYPE	NAME	DESCRIPTION
System.String	id	

TYPE	NAME	DESCRIPTION
System.Object	setting	

Returns

TYPE	DESCRIPTION
System.Threading.Tasks.Task<System.Object>	

Device Telemetry

Device Telemetry service is used to manage Alarms, Rules, AlarmsByRules, Message and Device Files.

REST operation groups

The Device Telemetry service REST API provides operations for working with the following:

Alarms	Manage Alarms
AlarmsByRule	Fetch paginated details of Rules with Alarms count and Alarms for specific rule
DeviceFiles	Fetch device files and download
Messages	Manage Messages
Rules	Manage Rules
Status	Health status operations

Alarms

Service: Device Telemetry

Operations

List	Get list of alarms
Details	Get alarm details
Delete	Delete alarms

List Alarms

Service: Device Telemetry

GET https://{platform-url}/telemetry /v1 /Alarms

URI Parameters

NAME	REQUIRED	TYPE	DESCRIPTION
from		string	Start time as ISO8601 or "NOW-{ISO 8601 duration}"
to		string	End time as ISO8601 or "NOW-{ISO 8601 duration}"
order		string	Set sort order: oldest ("asc"), newest ("desc")
skip		string	Alarms to skip. Used for pagination.
limit		string	Return count. Default 100.
devices		string	Filter used to request specific devices

Responses

NAME	TYPE
200 OK	[NameOfResponse]

Definitions

AlarmsByRuleController

Namespace: [Mmm.Iot.DeviceTelemetry.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class AlarmsByRuleController : Controller
```

Constructors

AlarmsByRuleController(IAlarms, IRules, ILogger<AlarmsByRuleController>)

Declaration

```
public AlarmsByRuleController(IAlarms alarmService, IRules ruleService, ILogger<AlarmsByRuleController> logger)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------------------------------------------|--------------|-------------|
| IAlarms | alarmService | |
| IRules | ruleService | |
| ILogger< AlarmsByRuleController > | logger | |

Methods

GetAsync(String, String, String, Nullable<Int32>, Nullable<Int32>, String)

Declaration

```
public Task<AlarmByRuleListApiModel> GetAsync(string from, string to, string order, int? skip, int? limit, string devices)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|-------------------------------|---------|-------------|
| System.String | from | |
| System.String | to | |
| System.String | order | |
| System.Nullable<System.Int32> | skip | |
| System.Nullable<System.Int32> | limit | |
| System.String | devices | |

Returns

| TYPE | DESCRIPTION |
|---------------------------------------------------|-------------|
| System.Threading.Tasks.Task<AlarmByRuleListModel> | |

GetAsync(String, String, String, String, Nullable<Int32>, Nullable<Int32>, String)

Declaration

```
public Task<AlarmListByRuleApiModel> GetAsync(string id, string from, string to, string order, int? skip, int? limit, string devices)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|-------------------------------|---------|-------------|
| System.String | id | |
| System.String | from | |
| System.String | to | |
| System.String | order | |
| System.Nullable<System.Int32> | skip | |
| System.Nullable<System.Int32> | limit | |
| System.String | devices | |

Returns

| TYPE | DESCRIPTION |
|------------------------------------------------------|-------------|
| System.Threading.Tasks.Task<AlarmListByRuleApiModel> | |

PostAsync(QueryApiModel)

Declaration

```
public Task<AlarmByRuleListModel> PostAsync(QueryApiModel body)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------|-------------|
| QueryApiModel | body | |

Returns

| TYPE | DESCRIPTION |
|---------------------------------------------------|-------------|
| System.Threading.Tasks.Task<AlarmByRuleListModel> | |

PostAsync(String, QueryApiModel)

Declaration

```
public Task<AlarmListByRuleApiModel> PostAsync(string id, QueryApiModel body)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------|-------------|
| System.String | id | |
| QueryApiModel | body | |

Returns

| TYPE | DESCRIPTION |
|------------------------------------------------------|-------------|
| System.Threading.Tasks.Task<AlarmListByRuleApiModel> | |

Class AlarmsController

Inheritance

System.Object
AlarmsController

Namespace: [Mmm.Iot.DeviceTelemetry.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class AlarmsController : Controller
```

Constructors

AlarmsController(IAlarms, ILogger<AlarmsController>)

Declaration

```
public AlarmsController(IAlarms alarmService, ILogger<AlarmsController> logger)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------------------------------------|--------------|-------------|
| IAlarms | alarmService | |
| ILogger< AlarmsController > | logger | |

Methods

Delete(AlarmIdListApiModel)

Declaration

```
public void Delete(AlarmIdListApiModel alarmList)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------------|-----------|-------------|
| AlarmIdListApiModel | alarmList | |

DeleteAsync(String)

Declaration

```
public Task DeleteAsync(string id)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------|-------------|
| System.String | id | |

Returns

| TYPE | DESCRIPTION |
|-----------------------------|-------------|
| System.Threading.Tasks.Task | |

GetAsync(String)

Declaration

```
public Task<AlarmApiModel> GetAsync(string id)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------|-------------|
| System.String | id | |

Returns

| TYPE | DESCRIPTION |
|--------------------------------------------|-------------|
| System.Threading.Tasks.Task<AlarmApiModel> | |

ListAsync(String, String, String, Nullable<Int32>, Nullable<Int32>, String)

Declaration

```
public Task<AlarmListApiModel> ListAsync(string from, string to, string order, int? skip, int? limit, string devices)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|-------------------------------|---------|-------------|
| System.String | from | |
| System.String | to | |
| System.String | order | |
| System.Nullable<System.Int32> | skip | |
| System.Nullable<System.Int32> | limit | |
| System.String | devices | |

Returns

| TYPE | DESCRIPTION |
|------------------------------------------------|-------------|
| System.Threading.Tasks.Task<AlarmListApiModel> | |

PatchAsync(String, AlarmStatusApiModel)

Declaration

```
public Task<AlarmApiModel> PatchAsync(string id, AlarmStatusApiModel body)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------------|------|-------------|
| System.String | id | |
| AlarmStatusApiModel | body | |

Returns

| TYPE | DESCRIPTION |
|--------------------------------------------|-------------|
| System.Threading.Tasks.Task<AlarmApiModel> | |

PostAsync(QueryApiModel)

Declaration

```
public Task<AlarmListApiModel> PostAsync(QueryApiModel body)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------|-------------|
| QueryApiModel | body | |

Returns

| TYPE | DESCRIPTION |
|------------------------------------------------|-------------|
| System.Threading.Tasks.Task<AlarmListApiModel> | |

Class DeviceFilesController

Inheritance

System.Object

DeviceFilesController

Namespace: [Mmm.Iot.DeviceTelemetry.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class DeviceFilesController : Controller
```

Constructors

DeviceFilesController(IDeviceFileUploads)

Declaration

```
public DeviceFilesController(IDeviceFileUploads deviceFileUploads)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|--------------------|-------------------|-------------|
| IDeviceFileUploads | deviceFileUploads | |

Methods

GetDeviceUploads(String)

Declaration

```
public Task<DeviceFileListApiModel> GetDeviceUploads(string deviceId)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|----------|-------------|
| System.String | deviceId | |

Returns

| TYPE | DESCRIPTION |
|-----------------------------------------------------|-------------|
| System.Threading.Tasks.Task<DeviceFileListApiModel> | |

GetFileContents(DownloadRequest)

Declaration

```
public Task<IActionResult> GetFileContents(DownloadRequest downloadRequest)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|-----------------|-----------------|-------------|
| DownloadRequest | downloadRequest | |

Returns

| TYPE | DESCRIPTION |
|-------------------------------------------|-------------|
| System.Threading.Tasks.Task<ActionResult> | |

Class MessagesController

Inheritance

System.Object
MessagesController

Namespace: [Mmm.Iot.DeviceTelemetry.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public sealed class MessagesController : Controller
```

Constructors

MessagesController(IMessages, ILogger<MessagesController>, AppConfig)

Declaration

```
public MessagesController(IMessages messageService, ILogger<MessagesController> logger, AppConfig config)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|-----------------------------------------------|----------------|-------------|
| IMessages | messageService | |
| ILogger< MessagesController > | logger | |
| AppConfig | config | |

Methods

GetAsync(String, String, String, Nullable<Int32>, Nullable<Int32>, String)

Declaration

```
public Task<MessageListApiModel> GetAsync(string from, string to, string order, int? skip, int? limit, string devices)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|-------------------------------|---------|-------------|
| System.String | from | |
| System.String | to | |
| System.String | order | |
| System.Nullable<System.Int32> | skip | |
| System.Nullable<System.Int32> | limit | |
| System.String | devices | |

Returns

| TYPE | DESCRIPTION |
|--------------------------------------------------|-------------|
| System.Threading.Tasks.Task<MessageListApiModel> | |

GetTopDeviceMessagesAsync(Nullable<Int32>, String)

Declaration

```
public Task<MessageListApiModel> GetTopDeviceMessagesAsync(int? limit, string deviceId)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|-------------------------------|----------|-------------|
| System.Nullable<System.Int32> | limit | |
| System.String | deviceId | |

Returns

| TYPE | DESCRIPTION |
|--------------------------------------------------|-------------|
| System.Threading.Tasks.Task<MessageListApiModel> | |

PostAsync(QueryApiModel)

Declaration

```
public Task<MessageListApiModel> PostAsync(QueryApiModel body)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------|-------------|
| QueryApiModel | body | |

Returns

| TYPE | DESCRIPTION |
|--------------------------------------------------|-------------|
| System.Threading.Tasks.Task<MessageListApiModel> | |

Class RulesController

Inheritance

System.Object

RulesController

Namespace: [Mmm.Iot.DeviceTelemetry.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public sealed class RulesController : Controller
```

Constructors

RulesController(IRules)

Declaration

```
public RulesController(IRules ruleService)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|--------|-------------|-------------|
| IRules | ruleService | |

Methods

DeleteAsync(String)

Declaration

```
public Task DeleteAsync(string id)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------|-------------|
| System.String | id | |

Returns

| TYPE | DESCRIPTION |
|-----------------------------|-------------|
| System.Threading.Tasks.Task | |

GetAsync(String)

Declaration

```
public Task<RuleApiModel> GetAsync(string id)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------|-------------|
| System.String | id | |

Returns

| TYPE | DESCRIPTION |
|-------------------------------------------|-------------|
| System.Threading.Tasks.Task<RuleApiModel> | |

ListAsync(String, Nullable<Int32>, Nullable<Int32>, String, Nullable<Boolean>)

Declaration

```
public Task<RuleListApiModel> ListAsync(string order, int? skip, int? limit, string groupId, bool? includeDeleted)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------------------------|----------------|-------------|
| System.String | order | |
| System.Nullable<System.Int32> | skip | |
| System.Nullable<System.Int32> | limit | |
| System.String | groupId | |
| System.Nullable<System.Boolean> | includeDeleted | |

Returns

| TYPE | DESCRIPTION |
|-----------------------------------------------|-------------|
| System.Threading.Tasks.Task<RuleListApiModel> | |

PostAsync(String, RuleApiModel)

Declaration

```
public Task<RuleApiModel> PostAsync(string template, RuleApiModel rule)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|----------|-------------|
| System.String | template | |
| RuleApiModel | rule | |

Returns

| TYPE | DESCRIPTION |
|-------------------------------------------|-------------|
| System.Threading.Tasks.Task<RuleApiModel> | |

PutAsync(String, RuleApiModel)

Declaration

```
public Task<RuleApiModel> PutAsync(string id, RuleApiModel rule)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------|-------------|
| System.String | id | |
| RuleApiModel | rule | |

Returns

| TYPE | DESCRIPTION |
|-------------------------------------------|-------------|
| System.Threading.Tasks.Task<RuleApiModel> | |

Class StatusController

Inheritance

System.Object

StatusController

Namespace: [Mmm.Iot.DeviceTelemetry.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public sealed class StatusController : ControllerBase
```

Constructors

StatusController(IStatusService)

Declaration

```
public StatusController(IStatusService statusService)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|----------------|---------------|-------------|
| IStatusService | statusService | |

Methods

GetAsync()

Declaration

```
public Task<StatusApiModel> GetAsync()
```

Returns

| TYPE | DESCRIPTION |
|---------------------------------------------|-------------|
| System.Threading.Tasks.Task<StatusApiModel> | |

Ping()

Declaration

```
public IActionResult Ping()
```

Returns

| TYPE | DESCRIPTION |
|---------------|-------------|
| IActionResult | |

Diagnostic Service

This document gives the overview of diagnostic service which will log the info.

Within each Serenity instance an interactive Swagger UI is available at following path

```
/diagnostics/index.html
```

Rest Operation Groups

The Diagnostics Service REST API provides operations for working with the following:

| OPERATION GROUP | DESCRIPTION |
|------------------------------------|------------------------------------------|
| Diagnostics Events | Logs the events info passed. |
| Status | Health Status operations of the Service. |

Diagnostics Events Controller

Service: Diagnostics

Operations

| OPERATION | DESCRIPTION |
|--------------------------------------|------------------------------------------|
| Post Log Diagnostics | Save the logs with respective event type |

Post Log Diagnostics

This Method is used to save the logs with respective event type.

Permissions

ReadAll permission is required to call this api.

Http Request

```
POST /diagnostics/v1/diagnosticsevents
```

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

In the request body, supply a JSON representation of DiagnosticsEventModel object.

Following are the fields which are required for the user to be created successfully.

| PROPERTY | VALUE | REQUIRED |
|-----------------|-----------------------------------------------------|--------------|
| EventType | Name of the user | Required |
| SessionId | Current status of the user ie., Invited or Member | Not Required |
| EventProperties | Role of the user i.e., admin, readonly, contributor | Not Required |

Sample Request

```
/diagnostics/v1/diagnosticsevents
```

Sample Request Body

```
{
  "EventType": "TestEventDiagnosticLog",
  "SessionId": "TestSession"
}
```

Response

```
201 Created
```

Security

Type: OpenID Connect

Flow: implicit

Authorization URL: <https://login.microsoftonline.com/crsltestab2c.onmicrosoft.com>

Status

Service: Diagnostics

Status Contoller provides Health status of the Service and its dependencies.

Operations

| OPERATION | DESCRIPTION |
|-----------------------------|-------------------------------------------------|
| Get Status | Gets status of the Service and its dependencies |
| Ping Status | Provides the health status of the service. |

Get Status

API that fetches the status of Diagnostic Service.

Permissions

N/A

Http Request

GET /diagnostics/v1/Status

Request headers

| HEADER | VALUE |
|--------------|------------------|
| Content-Type | application/json |

Request Body

N/A

Response

```
{
  "Name": "Diagnostics",
  "Status": {
    "IsHealthy": true,
    "Message": "Alive and well!"
  },

IoTHub Manager Service REST API

The IoTHub Manager service is used to manage Azure IoT Hub and devices.

Within each Serenity Instance an interactive Swagger UI is available at the following path
`https://{platform-url}/iothubmanager/index.html` For more information, [click here](#).

REST operation groups

The IoTHub Manager service REST API provides operations for working with the following:

| OPERATION GROUP | DESCRIPTION |
|----------------------------------|-----------------------------------------------------------------------------|
| Deployments | Device Configuration operations to manage the Device Firmware. |
| DeviceProperties | Device Properties operation to get the Properties data from Devices. |
| Devices | CRUD operations, Invoke method operations for Devices. |
| Jobs | Create, Details for IoT Hub jobs to manage the tags, properties of devices. |
| Modules | Details operations of the Edge Modules. |
| Status | Health status operations for the Service. |

Deployments

Service: IoT Hub Manager

Operations

| OPERATION | DESCRIPTION |
|---------------------------------|---------------------------------------------------------------------------------------------------------------|
| Create Deployment | Creates a Device Configuration for Firmware or custom updates. |
| Get Deployments | Lists the deployments from the storage. |
| Get Deployment | Gets the details of specifed deployment from the storage or from IoT Hub based on the state. |
| Inactivate/Delete Deployment | Removes the Device Configuration from IoT Hub and marks the deployment as either inactivated or deleted. |
| Reactivate Deployment | Creates a Device Configuration using the data from the Inactivated deployment targetting the same conditions. |
| Get Deployment Impacted Devices | Lists the devices which are affected by the Deployment. |
| Get Deployment Impacted Modules | Lists the modules which are affected by the Deployment. |
| Get Deployment Report | rovides the report of the devices which are impacted by deployment in byte format. |

Create Deployment

Creates a new IoT Hub Configurations for IoT Devices or Edge Devices.

Http Request

```
POST /iothub-manager/v1/deployments
```

Permissions

CreateDeployments permission is required to call this api.

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

In the request body, supply a JSON representation of DeploymentApiModel object.

Following are the fields which are required for the deployment to create successfully.

| PROPERTY | VALUE | REQUIRED |
|------------------|-----------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| DeviceGroupId | Device Group Id that is being targetted by Configuration | Yes |
| DeviceGroupName | DeviceGroupName | Yes |
| DeviceGroupQuery | JSON Serialized string of Conditions of DeviceGroup | No, If DeviceGroupId is provided, DeviceGroupQuery will be populated by fetching details of DeviceGroup using DeviceGroupId |
| Name | Deployment Name | Yes |
| PackageId | PackageId that is used for content to be used for configuration | Yes, If PackageContent is not provided. |
| PackageName | Name of the Package with Version Number | No |
| PackageContent | Configuration Content | Yes. If PackageContent is not provided but PackageId is provided, package content will be filled using package details. |
| Priority | Priority for Configuration | Yes, Should be a postive number |
| PackageType | Type which specifies the type of devices targetted | Yes |

| PROPERTY | VALUE | REQUIRED |
|------------|----------------------------------------------------|-------------------------------------------------------------------------|
| ConfigType | Type which specifies the type of configuration | Yes, If PackageType is DeviceConfiguration |
| DeviceIds | List of DeviceIds to be targetted by Configuration | No, Can be provided if configuration needs to target specific deviceids |

Request Schema

```

```

Security

Type: OpenID Connect

Flow: implicit

Authorization URL: <https://login.microsoftonline.com/crsltestab2c.onmicrosoft.com>

Inactivate Deployment

Removes the Device Configuration from IoT Hub and marks the deployment as either inactivated or deleted.

Note:

Inactivated Deployments are available for **Reactivating** Deleted Deployments are stored for audit.

Permissions

DeleteDeployments permission is required to call this api.

Http Request

```
DELETE /iothub-manager/v1/deployments/{id}?isDelete={isDelete}
```

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Query Params

| NAME | VALUE |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------|
| id | Deployment Id |
| isDelete | Default value is true , which will delete the deployment.
If value id false , which will result in Inactivating a deployment. |

Request Body

NA

Response

If successful, this method returns HTTP response code 200.

Examples

1. Inactivating a Deployment.

```
DELETE /iothub-manager/v1/deployments/a603893d-3ffd-46c4-ab8c-5d8147d1cfa4?isDelete=false
```

1. Deleting a Deployment. `HTTP DELETE /iothub-manager/v1/deployments/a603893d-3ffd-46c4-ab8c-5d8147d1cfa4 ###`
Security Type: OpenID Connect
Flow: implicit
Authorization URL: <https://login.microsoftonline.com/crsltestab2c.onmicrosoft.com>

Reactivate Deployment

Creates a Device Configuration using the data from the Inactivated deployment targetting the same device group.

Note:

Inactivated Deployments are available for **Reactivating**

Permissions

CreateDeployments permission is required to call this api.

Http Request

```
PUT /iothub-manager/v1/deployments/{id}
```

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Query Params

| NAME | VALUE |
|------|---------------------------|
| id | Inactivated Deployment Id |

Request Body

NA

Response

If successful, this method returns HTTP response code 200.

Security

Type: OpenID Connect
Flow: implicit
Authorization URL: <https://login.microsoftonline.com/crsctestab2c.onmicrosoft.com>

Examples

- 1. Reactivating a Deployment.

```
PUT /iothub-manager/v1/deployments/a603893d-3ffd-46c4-ab8c-5d8147d1cfa4
```

Get Deployment Impacted Devices

Lists the devices which are affected by the Deployment.

Permissions

ReadAll permission is required to call this api.

Http Request

```
POST /iothub-manager/v1/deployments/{id}?isLatest={isLatest}
```

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Query Params

| NAME | VALUE |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| id | Deployment Id |
| isLatest | true will retrieve the data of Devices using the query from request body
false will retrieve the data from devices from storage, since the deployment is not currently impacting the device group. |

Request Body

string representing the query to fetch the devices.

Response

If successful, this method returns DeviceListApiModel in response body

Get Deployment Impacted Modules

Lists the Modules which are affected by the Deployment.

Permissions

ReadAll permission is required to call this api.

Http Request

```
POST /iothub-manager/v1/deployments/Modules/{id}?isLatest={isLatest}
```

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Query Params

| NAME | VALUE |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| id | Deployment Id |
| isLatest | true will retrieve the data of Modules using the query from request body
false will retrieve the data from Modules from storage, since the deployment is not currently impacting the device group. |

Request Body

string representing the query to fetch the devices.

Response

If successful, this method returns TwinPropertiesListApiModel in response body

Response Schema

```
{
  "metadata": {
    "additionalProp1": "string",
    "additionalProp2": "string",

```

Get Deployment Report

Provides the report of the devices which are impacted by deployment in byte array.

Permissions

ReadAll permission is required to call this api.

Http Request

```
POST /iothub-manager/v1/deployments/Report/{id}?isLatest={isLatest}
```

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Query Params

| NAME | VALUE |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| id | Deployment Id |
| isLatest | true will retrieve the deployment data from IoTHub
false will retrieve the data from storage, since the deployment is not currently impacting the device group. |

Request Body

NA

Response

If successful, this method returns byte array data.

Security

Type: OpenID Connect

Flow: implicit

Authorization URL: <https://login.microsoftonline.com/crsctestab2c.onmicrosoft.com>

Device Properties

Service: IoT Hub Manager

Operations

| OPERATION | DESCRIPTION |
|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Get Device Properties | lists the device properties from DeviceProperties Cache which contains the data from Tags and Reported Properties of the Devices. |

Get Device Properties

API Method that lists the device properties from DeviceProperties Cache which contains the data from Tags and Reported Properties of the Devices.

Permissions

ReadAll

Http Request

GET /iothubmanager/v1/status

Request headers

| HEADER | VALUE |
|--------------|------------------|
| Content-Type | application/json |

Request Body

N/A

Response

If successful, this method returns **DevicePropertiesApiModel** object in the response body.

Response Schema

```
{
  "items": [
    "string"
  ],
  "metadata": {
    "additionalProp1": "string",
    "additionalProp2": "string",
    "additionalProp3": "string"
  }
}
```

Sample Response

```
{

Devices

Service: IoT Hub Manager

Operations

| OPERATION | DESCRIPTION |
|------------------------------------------------|------------------------------------------------------------------------------------------------------|
| Get Devices. | Lists the Devices based on the query conditions. |
| Query Devices. | Lists the Devices based on the query conditions from request body. |
| Get Device. | Retrives the Device data based on the DeviceId. |
| Get Device Deployment History. | Retrieves the DeviceTwins properties from the Deployment Impacted Devices collection for the device. |
| Create Device. | Creates an IoT or Edge Device in IoT Hub. |
| Update Device. | Updates the device data. |
| Delete Device | Deletes the device. |
| Invoke Device Method. | Invokes a direct method on Device using a payload |
| Send CloudToDevice Message. | Sends messages to Device from IoT Hub to trigger actions. |
| Get Device Files. | Lists the file urls uploaded by the Device. |

Get Devices

Lists the Devices based on the query conditions.

Permissions

ReadAll permission is required to call this api.

Http Request

GET /iothub-manager/v1/devices?query={query}

Request headers

| HEADER | VALUE |
|-------------------|------------------------------------------------------------------------------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |
| x-ms-continuation | Continuation Token from response of previous request,if request is called to get next dataset. |

Query Params

| NAME | VALUE |
|-------|------------------------------------------------------|
| query | URL encoded string from Conditions to query devices. |

Request Body

NA

Response

If successful, this method returns DeviceListApiModel object in the response body.

Response Schema

```

```

Query Devices

Lists the Devices based on the query conditions from request body.

Permissions

ReadAll permission is required to call this api.

Http Request

| |
|---------------------------------------|
| POST /iothub-manager/v1/devices/query |
|---------------------------------------|

Request headers

| HEADER | VALUE |
|-------------------|------------------------------------------------------------------------------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |
| x-ms-continuation | Continuation Token from response of previous request,if request is called to get next dataset. |

Request Body

JSON serialized string representing the conditions to fetch the devices.

Response

If successful, this method returns DeviceListApiModel object in the response body.

Response Schema

```

Security

Type: OpenID Connect

Flow: implicit

Authorization URL: <https://login.microsoftonline.com/crsltestab2c.onmicrosoft.com>

Example

1. Create Device with auto generated authentication keys.

```
POST /iothubmanager/v1/devices
```

Request

```
{
  "Id": "TestDevice",
  "IsEdgeDevice": false,
  "IsSimulated": false,
  "Enabled": true,
  "Authentication": {}
}
```

Response

```
{
  "ETag": "\"Mjk1MTYxMjc5\"|AAAAAAAAAAE=",
  "Id": "TestDevice",
  "C2DMessageCount": 0,
  "LastActivity": "0001-01-01T00:00:00",
  "Connected": false,
  "Enabled": true,
  "LastStatusUpdated": "0001-01-01T00:00:00",
  "IoTHubHostName": "iothub-233a1ca2.azure-devices.net",
  "$metadata": {
    "$type": "Device;1",
    "$uri": "/v1/devices/TestDevice",
    "$twin_uri": "/v1/devices/TestDevice/twin"
  },
  "Properties": {
    "Reported": {},
    "Desired": {},
    "DeviceId": "",
    "ModuleId": ""
  },
  "Tags": {},
  "IsEdgeDevice": false,
  "IsSimulated": false,

}
```

Security

Type: OpenID Connect

Flow: implicit

Authorization URL: <https://login.microsoftonline.com/crs1testab2c.onmicrosoft.com>

Delete Device

Used to delete device.

Permissions

DeleteDevices permission is required to call this api.

Http Request

```
DELETE /iothub-manager/v1/devices/{id}
```

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Query Params

| NAME | VALUE |
|------|-----------|
| id | Device Id |

Request Body

NA

Response

If successful, this method returns 200 success reponse.

Security

Type: OpenID Connect

Flow: implicit

Authorization URL: <https://login.microsoftonline.com/crsltestab2c.onmicrosoft.com>

Examples

- 1. Delete a device using deviceid

```
DELETE /iothub-manager/v1/devices/TestDevice
```

Response

```
200
```

Invoke Device Method

Used to invoke a direct method on Device using a payload.

Permissions

CreateJobs permission is required to call this api.

Http Request

```
POST /iothub-manager/v1/devices/{id}/methods
```

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Query Params

| NAME | VALUE |
|------|-----------|
| id | Device Id |

Request Schema

```
{
  "name": "string",
  "responseTimeout": {},
  "connectionTimeout": {},
  "jsonPayload": "string"
}
```

Request Body

In the request body, supply a JSON representation of **MethodParameterApiModel** object.

Sample Request

```
{
  "Name": "methodName1",
  "JsonPayload": "{TestPayLoad}"
}
```

Response

If successful, this method returns **MethodResultApiModel** object in the response body.

Response Schema

```
{
  "status": "int",
  "jsonPayload": "string"
}
```

Sample Response

```
{  
  "status": "200",  
  "JsonPayload": "{TestAcknowledgement}"  
}
```

Security

Type: OpenID Connect

Flow: implicit

Authorization URL: <https://login.microsoftonline.com/crsltestab2c.onmicrosoft.com>

Send CloudToDevice Message

Used to send messages to Device from IoTHub.

Permissions

SendC2DMessages permission is required to call this api.

Http Request

```
POST /iothub-manager/v1/devices/{id}/c2dmessage
```

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Query Params

| NAME | VALUE |
|------|-----------|
| id | Device Id |

Request Body

Any message as string.

Response

If successful, this method returns 200 response code.

Security

Type: OpenID Connect

Flow: implicit

Authorization URL: <https://login.microsoftonline.com/crsctestab2c.onmicrosoft.com>

Examples

- 1. Send message to device.

```
POST iothubmanager/v1/devices/SimulatedDevice/c2dmessage
```

Request Body

```
{"message": "Message to send to device"}
```

Response

```
200
```

Get Device Files

Lists the files uploaded by the Device.

Permissions

ReadAll permission is required to call this api.

Http Request

```
GET /iothub-manager/v1/devices/files/{id}
```

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Query Params

| NAME | VALUE |
|------|-----------|
| id | Device Id |

Request Body

NA

Response

If successful, this method returns List of URLs of files in the response body.

Response Schema

```
[
  "string"
]
```

Sample Response

```
[
  "https://testacct.blob.core.windows.net/209d7f79-39aa-4e2a-8e9c-56f04f7633f9-iot-file-upload/TestDevice/myimage1.png?sv=2018-03-28&sr=b&sig=wrCCy%2B22yNf9xeP5hnIgCi2LB3L5tdrx4HbrPhP5L6Q%3D&st=2020-10-31T07%3A05%3A10Z&se=2020-10-31T07%3A10%3A10Z&sp=rw",

Jobs

Service: IoT Hub Manager

Operations

| OPERATION | DESCRIPTION |
|-----------------------------|-------------------------------------------------------------------------------------|
| Get Jobs. | Lists the jobs from IoT Hub based on timeframe, job type and job status. |
| Get Job. | Gets the details of an job from IoT Hub based on jobid, job status. |
| Create Job. | Creates a Job to add tags, modify properties or invoke methods on selected devices. |

Get Jobs

Lists the jobs from IoTHub based on timeframe, job type and job status.

Permissions

ReadAll permission is required to call this api.

Http Request

```
GET /iothubmanager/v1/jobs?from={from}&to={to}&jobType={jobType}&jobStatus={jobStatus}&pageSize={pageSize}
```

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Query Params

| NAME | VALUE |
|-----------|---------------------------------------------------------------------------------------------------------------------------|
| from | Start Timeframe to consider |
| to | End Timeframe to consider |
| jobType | Unknown = 0
ScheduleDeviceMethod = 3
ScheduleUpdateTwin = 4, |
| jobStatus | Unknown = 0
Enqueued = 1
Running = 2
Completed = 3
Failed = 4
Cancelled = 5
Scheduled = 6
Queued = 7 |
| pageSize | Indicates the no of jobs that page should contains when queried from IoTHub. Will not impact the end result. |

Request Body

NA

Response

If successful, this method returns **List of JobApiModel** object in the response body.

Response Schema

Examples

1. Get Jobs based on TimeFrame

```
GET iothubmanager/v1/jobs?from=NOW-P1M&to=NOW
```

2. Get Jobs based on TimeFrame and Job Status

```
GET iothubmanager/v1/jobs?from=NOW-P1M&to=NOW&jobStatus=2
```

3. Get Jobs based on TimeFrame and Job Type

```
GET iothubmanager/v1/jobs?from=NOW-P1M&to=NOW&jobType=4
```

4. Get Jobs based on TimeFrame and Job Status and JobType

```
GET iothubmanager/v1/jobs?from=NOW-P1M&to=NOW&jobStatus=2&jobType=4
```

Create Job

Create a Job to add tags, modify properties or invoke methods on selected devices.

Permissions

CreateJobs permission is required to call this api.

Http Request

POST /iothubmanager/v1/jobs

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |

Examples

1. Job to update tags of a Device.

Http Request

```
POST /iothubmanager/v1/jobs
```

RequestBody

```

{
  "JobId": "Test-c372b74f-0d92-4b5c-9148-524fbaaf4e58",
  "QueryCondition": "deviceId in ['DemoDevice']",
  "MaxExecutionTimeInSeconds": 0,
  "UpdateTwin": {
    "Tags": {
      "TestTag": "Test"
    }
  }
}

```

Response

```

{
  "JobId": "Test-c372b74f-0d92-4b5c-9148-524fbaaf4e58",
  "MaxExecutionTimeInSeconds": 0,
  "Type": 4,
  "Status": 7
}

```

2. Job to execute direct on devices.

Request

```
{
  "JobId": "Test-c372b74f-0d92-4b5c-9148-524fbaaf4e58",
  "QueryCondition": "deviceId in ['DemoDevice']",
  "MaxExecutionTimeInSeconds": 0,
  "MethodParameter": {
    "Name": "methodName1",
    "JsonPayload": "{TestPayLoad}"
  }
}
```

Response

```
{
  "JobId": "Test-c372b74f-0d92-4b5c-9148-524fbaaf4e58",
  "MaxExecutionTimeInSeconds": 0,
  "Type": 3,
  "Status": 7
}
```

Modules

Service: IoT Hub Manager

Operations

| OPERATION | DESCRIPTION |
|--------------------------------|--------------------------------------------------------------------|
| Get Modules. | Lists the Modules based on the query conditions. |
| Query Modules. | Lists the Modules based on the query conditions from request body. |
| Get Module. | Gets the Module data based on the DeviceId and ModuleId. |

Get Modules

Lists the Modules based on the query conditions.

Permissions

ReadAll permission is required to call this api.

Http Request

```
GET /iothub-manager/v1/modules?query={query}
```

Request headers

| HEADER | VALUE |
|-------------------|------------------------------------------------------------------------------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |
| x-ms-continuation | Continuation Token from response of previous request,if request is called to get next dataset. |

Query Params

| NAME | VALUE |
|-------|------------------------------------------------------|
| query | URL encoded string from Conditions to query devices. |

Request Body

NA

Response

If successful, this method returns **TwinPropertiesListApiModel** object in the response body.

Response Schema

```
{
  "metadata": {
    "additionalProp1": "string",
    "additionalProp2": "string",
    "additionalProp3": "string"

}
```

Query Modules

Lists the Modules based on the query conditions from request body.

Permissions

ReadAll permission is required to call this api.

Http Request

POST /iothub-manager/v1/modules/query

Request headers

| HEADER | VALUE |
|-------------------|------------------------------------------------------------------------------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |
| x-ms-continuation | Continuation Token from response of previous request,if request is called to get next dataset. |

Request Body

String representing conditions to get the modules.

Response

If successful, this method returns **TwinPropertiesListApiModel** object in the response body.

Response Schema

```
{
  "metadata": {
    "additionalProp1": "string",
    "additionalProp2": "string",
    "additionalProp3": "string"
  },
  "continuationToken": "string",
  "items": [
    {
      "reported": {

          },
          "edgeHub": {
            "type": "docker",
            "settings": {
              "image": "mcr.microsoft.com/azureiotedge-hub:1.0",
              "createOptions": "{}"
            },
            "status": "running",
            "restartPolicy": "always"
          }
        },
        "modules": {}
      },
      "DeviceId": "TestDevice",
      "ModuleId": "$edgeAgent"
    }
  ]
}
```

Get Module

Gets the Module data based on the DeviceId and ModuleId.

Permissions

ReadAll permission is required to call this api.

Http Request

```
GET /iothub-manager/v1/modules/{deviceId}/{moduleId}
```

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Query Params

| NAME | VALUE |
|----------|-------------------------|
| deviceId | DeviceId of Edge Device |
| moduleId | ModuleId |

Request Body

NA

Response

If successful, this method returns **TwinPropertiesApiModel** object in the response body.

Response Schema

```

{
  "reported": {
    "additionalProp1": [
      null
    ],
    "additionalProp2": [
      null
    ],
    "additionalProp3": [
      null
    ]
  },
  "desired": {
    "additionalProp1": [
      null
    ],
    "additionalProp2": [
      null
    ],
    "additionalProp3": [
      null
    ]
  },
  "deviceId": "string",
  "moduleId": "string"
}

```

Sample Response

```

{
  "Reported": {},
  "Desired": {
    "schemaVersion": "1.0",
    "runtime": {
      "type": "docker",
      "settings": {
        "loggingOptions": "",
        "minDockerVersion": "v1.25"
      }
    },
    "systemModules": {
      "edgeAgent": {
        "type": "docker",
        "settings": {
          "image": "mcr.microsoft.com/azureiotedge-agent:1.0",
          "createOptions": "{}"
        }
      },
      "edgeHub": {
        "type": "docker",
        "settings": {
          "image": "mcr.microsoft.com/azureiotedge-hub:1.0",
          "createOptions": "{}"
        },
        "status": "running",
        "restartPolicy": "always"
      }
    },
    "modules": {}
  },
  "DeviceId": "TestDevice",
  "ModuleId": "$edgeAgent"
}

```

Security

Type: OpenID Connect

Flow: implicit

Authorization URL: <https://login.microsoftonline.com/crsctestab2c.onmicrosoft.com>

Examples

1. Get Module Data based on DeviceId and ModuleId

```
GET /iothub-manager/v1/modules/TestDevice/$edgeAgent
```

Response

```
{
  "Reported": {},
  "Desired": {
    "schemaVersion": "1.0",
    "runtime": {
      "type": "docker",
      "settings": {
        "loggingOptions": "",
        "minDockerVersion": "v1.25"
      }
    },
    "systemModules": {
      "edgeAgent": {
        "type": "docker",
        "settings": {
          "image": "mcr.microsoft.com/azureiotedge-agent:1.0",
          "createOptions": "{}"
        }
      },
      "edgeHub": {
        "type": "docker",
        "settings": {
          "image": "mcr.microsoft.com/azureiotedge-hub:1.0",
          "createOptions": "{}"
        },
        "status": "running",
        "restartPolicy": "always"
      }
    },
    "modules": {}
  },
  "DeviceId": "TestDevice",
  "ModuleId": "$edgeAgent"
}
```

Status

Service: IoT Hub Manager

Status Controller provides Health status of the Service and its dependencies.

Operations

| OPERATION | DESCRIPTION |
|-----------------------------|-------------------------------------------------|
| Get Status | Gets status of the Service and its dependencies |
| Ping Status | Provides the health status of the service. |

Get Status

Provides the status of the IoT Hub Manager Service and its dependencies

Permissions

N/A

Http Request

GET /iothubmanager/v1/status

Request headers

| HEADER | VALUE |
|--------------|------------------|

[JobsController](#)

[ModulesController](#)

[StatusController](#)

Class DeploymentsController

Inheritance

System.Object

DeploymentsController

Namespace: [Mmm.Iot.IoTHubManager.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class DeploymentsController : Controller
```

Constructors

DeploymentsController(IDeployments)

Declaration

```
public DeploymentsController(IDeployments deployments)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|--------------|-------------|-------------|
| IDeployments | deployments | |

Methods

DeleteAsync(String, Boolean)

Declaration

```
public Task DeleteAsync(string id, bool isDelete = true)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|----------------|----------|-------------|
| System.String | id | |
| System.Boolean | isDelete | |

Returns

| TYPE | DESCRIPTION |
|-----------------------------|-------------|
| System.Threading.Tasks.Task | |

ExportDeploymentReport(String, Boolean)

Declaration

```
public Task<IActionResult> ExportDeploymentReport(string id, bool isLatest = true)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|----------------|----------|-------------|
| System.String | id | |
| System.Boolean | isLatest | |

Returns

| TYPE | DESCRIPTION |
|--------------------------------------------|-------------|
| System.Threading.Tasks.Task<IActionResult> | |

GetAsync()

Declaration

```
public Task<DeploymentListApiModel> GetAsync()
```

Returns

| TYPE | DESCRIPTION |
|-----------------------------------------------------|-------------|
| System.Threading.Tasks.Task<DeploymentListApiModel> | |

GetAsync(String, Boolean, Boolean)

Declaration

```
public Task<DeploymentApiModel> GetAsync(string id, bool includeDeviceStatus = false, bool isLatest = true)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|----------------|---------------------|-------------|
| System.String | id | |
| System.Boolean | includeDeviceStatus | |
| System.Boolean | isLatest | |

Returns

| TYPE | DESCRIPTION |
|-------------------------------------------------|-------------|
| System.Threading.Tasks.Task<DeploymentApiModel> | |

GetDeploymentImpactedDevices(String, String, Boolean)

Declaration

```
public Task<DeviceListApiModel> GetDeploymentImpactedDevices(string id, string query, bool isLatest = false)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------|-------------|
| System.String | id | |
| | | |

| TYPE | NAME | DESCRIPTION |
|----------------|----------|-------------|
| System.String | query | |
| System.Boolean | isLatest | |

Returns

| TYPE | DESCRIPTION |
|-------------------------------------------------|-------------|
| System.Threading.Tasks.Task<DeviceListApiModel> | |

GetDeploymentImpactedEdgeModules(String, String, Boolean)

Declaration

```
public Task<TwinPropertiesListApiModel> GetDeploymentImpactedEdgeModules(string id, string query, bool isLatest = false)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|----------------|----------|-------------|
| System.String | id | |
| System.String | query | |
| System.Boolean | isLatest | |

Returns

| TYPE | DESCRIPTION |
|---------------------------------------------------------|-------------|
| System.Threading.Tasks.Task<TwinPropertiesListApiModel> | |

PostAsync(DeploymentApiModel)

Declaration

```
public Task<DeploymentApiModel> PostAsync(DeploymentApiModel deployment)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|--------------------|------------|-------------|
| DeploymentApiModel | deployment | |

Returns

| TYPE | DESCRIPTION |
|-------------------------------------------------|-------------|
| System.Threading.Tasks.Task<DeploymentApiModel> | |

ReactivateAsync(String)

Declaration

```
public Task ReactivateAsync(string id)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------|-------------|
| System.String | id | |

Returns

| TYPE | DESCRIPTION |
|-----------------------------|-------------|
| System.Threading.Tasks.Task | |

Class DevicePropertiesController

Inheritance

System.Object

DevicePropertiesController

Namespace: [Mmm.Iot.IoTHubManager.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class DevicePropertiesController : Controller
```

Constructors

DevicePropertiesController(IDeviceProperties)

Declaration

```
public DevicePropertiesController(IDeviceProperties deviceProperties)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|-------------------|------------------|-------------|
| IDeviceProperties | deviceProperties | |

Methods

GetAsync()

Declaration

```
public Task<DevicePropertiesApiModel> GetAsync()
```

Returns

| TYPE | DESCRIPTION |
|-------------------------------------------------------|-------------|
| System.Threading.Tasks.Task<DevicePropertiesApiModel> | |

Class DevicesController

Inheritance

System.Object

DevicesController

Namespace: [Mmm.Iot.IoTHubManager.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class DevicesController : Controller
```

Constructors

DevicesController(IDevices, IDeviceService, IDeviceProperties)

Declaration

```
public DevicesController(IDevices devices, IDeviceService deviceService, IDeviceProperties deviceProperties)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|-------------------|------------------|-------------|
| IDevices | devices | |
| IDeviceService | deviceService | |
| IDeviceProperties | deviceProperties | |

Methods

DeleteAsync(String)

Declaration

```
public Task DeleteAsync(string id)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------|-------------|
| System.String | id | |

Returns

| TYPE | DESCRIPTION |
|-----------------------------|-------------|
| System.Threading.Tasks.Task | |

GetDeviceAsync(String)

Declaration

```
public Task<DeviceRegistryApiModel> GetDeviceAsync(string id)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------|-------------|
| System.String | id | |

Returns

| TYPE | DESCRIPTION |
|-----------------------------------------------------|-------------|
| System.Threading.Tasks.Task<DeviceRegistryApiModel> | |

GetDeviceDeploymentAsync(String)

Declaration

```
public Task<TwinPropertiesListApiModel> GetDeviceDeploymentAsync(string id)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------|-------------|
| System.String | id | |

Returns

| TYPE | DESCRIPTION |
|---------------------------------------------------------|-------------|
| System.Threading.Tasks.Task<TwinPropertiesListApiModel> | |

GetDeviceFilesAsync(String)

Declaration

```
public Task<List<string>> GetDeviceFilesAsync(string id)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------|-------------|
| System.String | id | |

Returns

| TYPE | DESCRIPTION |
|-----------------------------------------------------------------------------|-------------|
| System.Threading.Tasks.Task<System.Collections.Generic.List<System.String>> | |

GetDevicesAsync(String)

Declaration

```
public Task<DeviceListApiModel> GetDevicesAsync(string query)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|-------|-------------|
| System.String | query | |

Returns

| TYPE | DESCRIPTION |
|-------------------------------------------------|-------------|
| System.Threading.Tasks.Task<DeviceListApiModel> | |

InvokeDeviceMethodAsync(String, MethodParameterApiModel)

Declaration

```
public Task<MethodResultApiModel> InvokeDeviceMethodAsync(string id, MethodParameterApiModel parameter)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|-------------------------|-----------|-------------|
| System.String | id | |
| MethodParameterApiModel | parameter | |

Returns

| TYPE | DESCRIPTION |
|---------------------------------------------------|-------------|
| System.Threading.Tasks.Task<MethodResultApiModel> | |

PostAsync(DeviceRegistryApiModel)

Declaration

```
public Task<DeviceRegistryApiModel> PostAsync(DeviceRegistryApiModel device)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|------------------------|--------|-------------|
| DeviceRegistryApiModel | device | |

Returns

| TYPE | DESCRIPTION |
|-----------------------------------------------------|-------------|
| System.Threading.Tasks.Task<DeviceRegistryApiModel> | |

PutAsync(String, DeviceRegistryApiModel)

Declaration

```
public Task<DeviceRegistryApiModel> PutAsync(string id, DeviceRegistryApiModel device)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|------------------------|--------|-------------|
| System.String | id | |
| DeviceRegistryApiModel | device | |

Returns

| TYPE | DESCRIPTION |
|-----------------------------------------------------|-------------|
| System.Threading.Tasks.Task<DeviceRegistryApiModel> | |

QueryDevicesAsync(String)

Declaration

```
public Task<DeviceListApiModel> QueryDevicesAsync(string query)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|-------|-------------|
| System.String | query | |

Returns

| TYPE | DESCRIPTION |
|-------------------------------------------------|-------------|
| System.Threading.Tasks.Task<DeviceListApiModel> | |

SendCloudToDeviceAsync(String, String)

Declaration

```
public Task SendCloudToDeviceAsync(string id, string message)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|---------|-------------|
| System.String | id | |
| System.String | message | |

Returns

| TYPE | DESCRIPTION |
|-----------------------------|-------------|
| System.Threading.Tasks.Task | |

Class JobsController

Inheritance

System.Object

JobsController

Namespace: [Mmm.Iot.IoTHubManager.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class JobsController : Controller
```

Constructors

JobsController(IJobs)

Declaration

```
public JobsController(IJobs jobs)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|-------|------|-------------|
| IJobs | jobs | |

Methods

GetAsync(Nullable<JobType>, Nullable<JobStatus>, Nullable<Int32>, String, String)

Declaration

```
public Task<IEnumerable<JobApiModel>> GetAsync(JobType? jobType, JobStatus? jobStatus, int? pageSize, string from, string to)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|-------------------------------|-----------|-------------|
| System.Nullable<JobType> | jobType | |
| System.Nullable<JobStatus> | jobStatus | |
| System.Nullable<System.Int32> | pageSize | |
| System.String | from | |
| System.String | to | |

Returns

| TYPE | DESCRIPTION |
|----------------------------------------------------------------------------------|-------------|
| System.Threading.Tasks.Task<System.Collections.Generic.IEnumerable<JobApiModel>> | |

GetJobAsync(String, Nullable<Boolean>, Nullable<DeviceJobStatus>)

Declaration

```
public Task<JobApiModel> GetJobAsync(string jobId, bool? includeDeviceDetails, DeviceJobStatus? deviceJobStatus)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|----------------------------------|----------------------|-------------|
| System.String | jobId | |
| System.Nullable<System.Boolean> | includeDeviceDetails | |
| System.Nullable<DeviceJobStatus> | deviceJobStatus | |

Returns

| TYPE | DESCRIPTION |
|------------------------------------------|-------------|
| System.Threading.Tasks.Task<JobApiModel> | |

ScheduleAsync(JobApiModel)

Declaration

```
public Task<JobApiModel> ScheduleAsync(JobApiModel parameter)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|-------------|-----------|-------------|
| JobApiModel | parameter | |

Returns

| TYPE | DESCRIPTION |
|------------------------------------------|-------------|
| System.Threading.Tasks.Task<JobApiModel> | |

Class ModulesController

Inheritance

System.Object

ModulesController

Namespace: [Mmm.Iot.IoTHubManager.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class ModulesController : Controller
```

Constructors

ModulesController(IDevices)

Declaration

```
public ModulesController(IDevices devices)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|----------|---------|-------------|
| IDevices | devices | |

Methods

GetModuleTwinAsync(String, String)

Declaration

```
public Task<TwinPropertiesApiModel> GetModuleTwinAsync(string deviceId, string moduleId)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|----------|-------------|
| System.String | deviceId | |
| System.String | moduleId | |

Returns

| TYPE | DESCRIPTION |
|-----------------------------------------------------|-------------|
| System.Threading.Tasks.Task<TwinPropertiesApiModel> | |

GetModuleTwinsAsync(String)

Declaration

```
public Task<TwinPropertiesListApiModel> GetModuleTwinsAsync(string query)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|-------|-------------|
| System.String | query | |

Returns

| TYPE | DESCRIPTION |
|---------------------------------------------------------|-------------|
| System.Threading.Tasks.Task<TwinPropertiesListApiModel> | |

QueryModuleTwinsAsync(String)

Declaration

```
public Task<TwinPropertiesListApiModel> QueryModuleTwinsAsync(string query)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|-------|-------------|
| System.String | query | |

Returns

| TYPE | DESCRIPTION |
|---------------------------------------------------------|-------------|
| System.Threading.Tasks.Task<TwinPropertiesListApiModel> | |

Class StatusController

Inheritance

System.Object

StatusController

Namespace: [Mmm.Iot.IoTHubManager.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public sealed class StatusController : ControllerBase
```

Constructors

StatusController(IStatusService)

Declaration

```
public StatusController(IStatusService statusService)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|----------------|---------------|-------------|
| IStatusService | statusService | |

Methods

GetAsync()

Declaration

```
public Task<StatusApiModel> GetAsync()
```

Returns

| TYPE | DESCRIPTION |
|---------------------------------------------|-------------|
| System.Threading.Tasks.Task<StatusApiModel> | |

Ping()

Declaration

```
public IActionResult Ping()
```

Returns

| TYPE | DESCRIPTION |
|---------------|-------------|
| IActionResult | |

Tenant Manager

Tenant Manager offers APIs to maintains tenants, Alerting, tenants' readiness status, and health status of service.

Within each Serenity instance an interactive Swagger UI is available at the following path
`https://{platform-url}/auth/index.html` For more information about Swagger UI, [click here](#).

Rest Operation Groups

The Device Telemetry REST API provides operations for working with the following:

| OPERATION GROUP | DESCRIPTION |
|------------------------------|------------------------------------------|
| Tenant | Manage Tenant |
| Tenant Ready | Tenant readiness status |
| Alerting | Manage stream analytics job |
| Status | Health status operations for the Service |

Tenant

Service: Tenant Manager

Operations

| OPERATION | DESCRIPTION |
|-------------------------------------------------------------|-------------------------------------------------|
| Get Tenant details | Fetches tenant details |
| Get All Tenants details registred to a user | Fetches all tenant details regisitred to a user |
| Create Tenant | Create a tenant |
| Rename the Tenant | Rename a tenant |
| Delete Tenant | Delete tenant |

Get Tenant details

API that Gets information about a tenant that is stored in table storage

Permissions

ReadAll

Http Request

GET /tenantmanager/api/Tenant

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

N/A

Response

- Returns 200 OK and Tenant info:

```
json { "tenantId": "xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx", "iotHubName": "xxxxxxxx", "dpsName": "xxxxxxxx", "saJobName": "xxxxxxxx", "isIotHubDeployed": true, "markedForDeletion": true, "tenantName": "Tenant Name", "partitionKey": "xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx", "rowKey": "xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx", "timestamp": "2020-10-29T11:36:34.702Z", "eTag": "string" }
```

Get All Tenants details registered to a user

API that fetches the All Tenant details which are registered to the user.

Permissions

ReadAll

Http Request

GET /tenantmanager/api/Tenant/All

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

N/A

Response

- Returns 200 OK:

```
json { "Method": "GetTenants", "Models": [ { "roles": "[\"xxxxx\"]", "userId": "xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx", "tenantId": "xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx", "roleList": [ "xxxxx" ], "tenantName": "xxxxxx", "partitionKey": "xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx", "rowKey": "xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx", "timestamp": "0001-01-01T00:00:00+00:00", "eTag": null } ] }
```

Create Tenant

API that creates a new tenant to the user.

Other Attributes

SystemAdminAuthorize

Http Request

POST /tenantmanager/api/Tenant

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

N/A

Response

- Returns 200 OK and the new tenant info:

```
json { "message": "Your tenant is being created.", "tenantId": "xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx" }
```

- Status Code 401 - Invalid auth token

Rename the Tenant

API that renames the tenant name.

Other Attributes

SystemAdminAuthorize

Http Request

PUT /tenantmanager/api/Tenant/{tenantId}

Parameters

| PARAMETER | TYPE | DESCRIPTION |
|-----------|------|-------------|
| tenantId | guid | Tenant Id |

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

"New Tenant Name"

Response

- Returns 200 OK and Tenant info:

```
json { "tenantId": "xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx", "iotHubName": "xxxxxxxx", "dpsName":  
"xxxxxxxx", "saJobName": "xxxxxxxx", "isIotHubDeployed": true, "markedForDeletion": true, "tenantName":  
"Tenant Name", "partitionKey": "0", "rowKey": "xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx", "timestamp": "2020-  
10-29T11:36:34.702Z", "eTag": "string" }
```

Delete Tenant

API that deletes the specified tenant.

Other Attributes

SystemAdminAuthorize

Http Request

DELETE /tenantmanager/api/Tenant

Query parameters

| QUERY PARAMETER | TYPE | DESCRIPTION |
|---------------------|---------|------------------------------|
| ensureFullyDeployed | boolean | Default value is true |

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

N/A

Response

- Returns 200 OK

```
json { "tenantId": "xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx", "ensuredDeployment": true, "deletionRecord": {  
  "tenantTableStorage": true, "userTableStorage": true, "iotHub": true, "dps": true, "alerting": true, },  
  "fullyDeleted": true }
```

Tenant Ready

Service: Tenant Manager

Operations

| OPERATION | DESCRIPTION |
|--------------------------------------------------------|---------------------------------|
| Check specified tenant is ready or not | Fetches tenant readiness status |

Check specified tenant is ready or not

API that returns true or false depending on if the tenant is ready or not.

Permissions

| |
|-----|
| N/A |
|-----|

Http Request

| |
|-----------------------------------------------|
| GET /tenantmanager/api/TenantReady/{tenantId} |
|-----------------------------------------------|

Parameters

| PARAMETER | TYPE | DESCRIPTION |
|-----------|------|-------------|
| tenantId | guid | Tenant Id |

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

| |
|-----|
| N/A |
|-----|

Response

- Status Code 200:

| |
|------|
| true |
|------|

OR

| |
|-------|
| false |
|-------|

- Status Code 404 - Invalid tenant id

Alerting

Service: Tenant Manager

Operations

| OPERATION | DESCRIPTION |
|--------------------------------------------------|--------------------------------------|
| Get stream analytics job details | Fetches stream analytics job details |
| Create stream analytics job | Create stream analytics job |
| Remove stream analytics job | Remove stream analytics job |
| Start stream analytics job | Start stream analytics job |
| Stop stream analytics job | Stop stream analytics job |

Get stream analytics job details

API that fetches the details of stream analytics job assigned to tenant.

Permissions

ReadAll

Http Request

GET /tenantmanager /api /Alerting

Query parameters

| QUERY PARAMETER | TYPE | DESCRIPTION |
|-------------------|---------|---------------------------------------------------------------------------------------------|
| createlfNotExists | boolean | If true it creates a stream analytics job to a tenant. Default value is false |

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

N/A

Response

- Status Code 200:

```
json { "tenantId": "string", "streamAnalyticsJobName": "string", "jobState": "string", "isActive": true }
```

Create stream analytics job

API that creates a stream analytics job to tenant.

Permissions

EnableAlerting

Http Request

POST /tenantmanager /api /Alerting

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

N/A

Response

- Status Code 200:

```
json { "tenantId": "string", "streamAnalyticsJobName": "string", "jobState": "string", "isActive": true }
```

Remove stream analytics job

API that removes a stream analytics job to the tenant.

Permissions

DisableAlerting

Http Request

DELETE /tenantmanager /api /Alerting

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

N/A

Response

- Status Code 200:

```
json { "tenantId": "string", "streamAnalyticsJobName": "string", "jobState": "string", "isActive": true }
```

Start stream analytics job

API that starts the stream analytics job assigned to the tenant.

Permissions

EnableAlerting

Http Request

POST /tenantmanager /api /Alerting

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

N/A

Response

- Status Code 200:

```
json { "tenantId": "string", "streamAnalyticsJobName": "string", "jobState": "string", "isActive": true }
```

Stop stream analytics job

API that stops the stream analytics job assigned to the tenant.

Permissions

DisableAlerting

Http Request

POST /tenantmanager /api /Alerting/stop

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

N/A

Response

- Status Code 200.

Status

Service: Tenant Manager

Operations

| OPERATION | DESCRIPTION |

[StatusController](#)

[TenantController](#)

[TenantReadyController](#)

Class AlertingController

Inheritance

System.Object

AlertingController

Namespace: [Mmm.Iot.TenantManager.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class AlertingController : Controller
```

Constructors

AlertingController(IAalertingContainer, ILogger<AlertingController>)

Declaration

```
public AlertingController(IAalertingContainer alertingContainer, ILogger<AlertingController> logger)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|-----------------------------------------------|-------------------|-------------|
| IAalertingContainer | alertingContainer | |
| ILogger< AlertingController > | logger | |

Methods

AddAlertingAsync()

Declaration

```
public Task<StreamAnalyticsJobModel> AddAlertingAsync()
```

Returns

| TYPE | DESCRIPTION |
|------------------------------------------------------|-------------|
| System.Threading.Tasks.Task<StreamAnalyticsJobModel> | |

GetAlertingAsync(Boolean)

Declaration

```
public Task<StreamAnalyticsJobModel> GetAlertingAsync(bool createIfNotExists = false)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|----------------|-------------------|-------------|
| System.Boolean | createIfNotExists | |

Returns

| TYPE | DESCRIPTION |
|------------------------------------------------------|-------------|
| System.Threading.Tasks.Task<StreamAnalyticsJobModel> | |

RemoveAlertingAsync()

Declaration

```
public Task<StreamAnalyticsJobModel> RemoveAlertingAsync()
```

Returns

| TYPE | DESCRIPTION |
|------------------------------------------------------|-------------|
| System.Threading.Tasks.Task<StreamAnalyticsJobModel> | |

StartAsync()

Declaration

```
public Task<StreamAnalyticsJobModel> StartAsync()
```

Returns

| TYPE | DESCRIPTION |
|------------------------------------------------------|-------------|
| System.Threading.Tasks.Task<StreamAnalyticsJobModel> | |

StopAsync()

Declaration

```
public Task<StreamAnalyticsJobModel> StopAsync()
```

Returns

| TYPE | DESCRIPTION |
|------------------------------------------------------|-------------|
| System.Threading.Tasks.Task<StreamAnalyticsJobModel> | |

Class StatusController

Inheritance

System.Object
StatusController

Namespace: [Mmm.Iot.TenantManager.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public sealed class StatusController : ControllerBase
```

Constructors

StatusController(IStatusService)

Declaration

```
public StatusController(IStatusService statusService)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|----------------|---------------|-------------|
| IStatusService | statusService | |

Methods

GetAsync()

Declaration

```
public Task<StatusApiModel> GetAsync()
```

Returns

| TYPE | DESCRIPTION |
|---------------------------------------------|-------------|
| System.Threading.Tasks.Task<StatusApiModel> | |

Ping()

Declaration

```
public IActionResult Ping()
```

Returns

| TYPE | DESCRIPTION |
|---------------|-------------|
| IActionResult | |

Class TenantController

Inheritance

System.Object
TenantController

Namespace: [Mmm.Iot.TenantManager.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class TenantController : Controller
```

Constructors

TenantController(ITenantContainer, ILogger<TenantController>)

Declaration

```
public TenantController(ITenantContainer tenantContainer, ILogger<TenantController> logger)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------------------------------------|-----------------|-------------|
| ITenantContainer | tenantContainer | |
| ILogger< TenantController > | logger | |

Methods

DeleteAsync(Boolean)

Declaration

```
public Task<DeleteTenantModel> DeleteAsync(bool ensureFullyDeployed = true)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|----------------|---------------------|-------------|
| System.Boolean | ensureFullyDeployed | |

Returns

| TYPE | DESCRIPTION |
|------------------------------------------------|-------------|
| System.Threading.Tasks.Task<DeleteTenantModel> | |

GetAsync()

Declaration

```
public Task<TenantModel> GetAsync()
```

Returns

| TYPE | DESCRIPTION |
|------------------------------------------|-------------|
| System.Threading.Tasks.Task<TenantModel> | |

GetTenantsAsync()

Declaration

```
public Task<UserTenantListModel> GetTenantsAsync()
```

Returns

| TYPE | DESCRIPTION |
|--------------------------------------------------|-------------|
| System.Threading.Tasks.Task<UserTenantListModel> | |

PostAsync()

Declaration

```
public Task<CreateTenantModel> PostAsync()
```

Returns

| TYPE | DESCRIPTION |
|------------------------------------------------|-------------|
| System.Threading.Tasks.Task<CreateTenantModel> | |

UpdateAsync(String, String)

Declaration

```
public Task<TenantModel> UpdateAsync(string tenantId, string tenantName)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|------------|-------------|
| System.String | tenantId | |
| System.String | tenantName | |

Returns

| TYPE | DESCRIPTION |
|------------------------------------------|-------------|
| System.Threading.Tasks.Task<TenantModel> | |

Class TenantReadyController

Inheritance

System.Object

TenantReadyController

Namespace: [Mmm.Iot.TenantManager.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class TenantReadyController : Controller
```

Constructors

TenantReadyController(ITenantContainer, ILogger<TenantReadyController>)

Declaration

```
public TenantReadyController(ITenantContainer tenantContainer, ILogger<TenantReadyController> logger)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|--------------------------------------------------|-----------------|-------------|
| ITenantContainer | tenantContainer | |
| ILogger< TenantReadyController > | logger | |

Methods

GetAsync(String)

Declaration

```
public Task<bool> GetAsync(string tenantId)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|----------|-------------|
| System.String | tenantId | |

Returns

| TYPE | DESCRIPTION |
|---------------------------------------------|-------------|
| System.Threading.Tasks.Task<System.Boolean> | |

Device Groups

Service: Asa Manager

Operations

| OPERATION | DESCRIPTION |
|-----------------------------------------------------------------|---------------------------------------------------------------------------------------|
| Begin Device Group Conversion | Converts DeviceGroup data into CSV format for ASA Job. |
| Begin IoT Hub Job Delay Device Group Conversion | Converts DeviceGroup data into CSV format for ASA Job based on status of IoT Hub Job. |

Begin Device Group Conversion

API that begins the conversion of devicegroups data from cosmos collection into csv format for Azure Stream Analytics job.

Permissions

| |
|----|
| NA |
|----|

Http Request

| |
|----------------------|
| GET /v1/devicegroups |
|----------------------|

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

| |
|-----|
| N/A |
|-----|

Response

If successful, this method returns **BeginConversionApiModel** object in the response body.

Response Schema

| |
|------------------------------------------------------------|
| {
"tenantId": "string",
"operationId": "string"
} |
|------------------------------------------------------------|

Sample Response

| |
|------------------------------------------------------------------------------------------------------------------------|
| {
"tenantId": "ac1037c4-386e-4402-9209-f9602ce90afe",

} |
|------------------------------------------------------------------------------------------------------------------------|

Begin IoT Hub Job Delay Device Group Conversion

API that begins the conversion of devicegroups data from cosmos collection into csv format for Azure Stream Analytics job based on completion status of an IoT Hub Job.

Permissions

| |
|----|
| NA |
|----|

Http Request

| |
|---------------------------------------------|
| GET /v1/devicegroups/iothubjobdelay/{jobId} |
|---------------------------------------------|

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Query Params

| NAME | DESCRIPTION |
|-------|--------------------|
| jobId | JobId from IoT Hub |

Request Body

| |
|-----|
| N/A |
|-----|

Response

If successful, this method returns **BeginConversionApiModel** object in the response body.

Response Schema

| |
|------------------------------------------------------------|
| {
"tenantId": "string",
"operationId": "string"
} |
|------------------------------------------------------------|

Sample Response

| |
|------------------------------------------------------------------------------------------------------------------------|
| {
"tenantId": "ac1037c4-386e-4402-9209-f9602ce90afe",
"operationId": "c2412f4c-a397-4b7a-81a1-0d175a9b69c6"
} |
|------------------------------------------------------------------------------------------------------------------------|

Rules

Service: ASA Manager

Rules Controller contains methods which converts the Rules from CosmosCollection and converts into fileformat suitable for Azure Stream Analytics job.

Operations

| OPERATION | DESCRIPTION |
|---------------------------------------|--------------------------------------------------|
| Begin Rule Conversion | Converts Rules data into CSV format for ASA Job. |

Begin Rule Conversion

API that begins the conversion of rules data from cosmos collection into csv format for Azure Stream Analytics job.

Permissions

NA

Http Request

GET /v1/rules

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

N/A

Response

If successful, this method returns **BeginConversionApiModel** object in the response body.

Response Schema

```
{
  "tenantId": "string",
  "operationId": "string"
}
```

Sample Response

```
{
  "tenantId": "ac1037c4-386e-4402-9209-f9602ce90afe",

  }
}
```

Security

Type: OpenID Connect

Flow: implicit

Authorization URL: <https://login.microsoftonline.com/crsctestab2c.onmicrosoft.com>

Ping Status

API method to provide the health status of the service.

Permissions

N/A

Http Request

GET /v1/status/ping

Request headers

| HEADER | VALUE |
|--------------|------------------|
| Content-Type | application/json |

Request Body

N/A

Response

Respond with 200 Status code if service is up.

Security

Type: OpenID Connect

Flow: implicit

Authorization URL: <https://login.microsoftonline.com/crsltestab2c.onmicrosoft.com>

Storage Adapter Manager

Storage Adapter Manager offers APIs to maintains data in DB storage and health status of service.

Within each Serenity instance an interactive Swagger UI is available at the following path `/auth/index.html` for more information, [click here](#)

Rest Operation Groups

The Device Telemetry REST API provides operations for working with the following:

| OPERATION GROUP | DESCRIPTION |
|------------------------|------------------------------------------|
| Values | Manage data in storage |
| Status | Health status operations for the Service |

Values

Service: Storage Adapter

Operations

| OPERATION | DESCRIPTION |
|-------------------------------------------------------|-----------------------------------------------------|
| Get value for given collectionId and key | Fetches the stored data |
| Get all values in collectionId | Fetches list of stored data related to collectionId |
| Save value by collectionId and randomly generated key | Save data in storage |
| Update value by collectionId and key | Update data in storage |
| Delete value from storage | Delete data from storage |

Get value for given collectionId and key

API that fetches the data for a given collection and key.

Permissions

| |
|-----|
| N/A |
|-----|

Http Request

| |
|-------------------------------------------------|
| GET /v1/collections/{collectionId}/values/{key} |
|-------------------------------------------------|

Parameters

| PARAMETER | TYPE | DESCRIPTION |
|--------------|--------|-----------------------------------------------------------------------------|
| collectionId | string | Represents the collection of data or file stored in storage |
| key | string | It is a unique ID that represents a data or file, it also known as fileName |

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

| |
|-----|
| N/A |
|-----|

Response

- Status Code 200:

```
{
  "$metadata": {
    "$type": "Value;1",
    "$modified": "...",
    "$uri": "/v1/collections/test/values/filename"
  },
  "Key": "filename",
  "Data": "data to store",
  "ETag": "\"...\""
}
```

- Status Code 400 - Empty or invalid collection id or key. Valid characters are a-Z,A-Z,0-9,_ and -.

Security

Type: OpenID Connect

Flow: implicit

Authorization URL: <https://login.microsoftonline.com/crs1testab2c.onmicrosoft.com>

Get all values in collectionId

API that fetches all of the values under a given collection.

Permissions

| |
|-----|
| N/A |
|-----|

Http Request

| |
|-------------------------------------------|
| GET /v1/collections/{collectionId}/values |
|-------------------------------------------|

Parameters

| PARAMETER | TYPE | DESCRIPTION |
|--------------|--------|-------------------------------------------------------------|
| collectionId | string | Represents the collection of data or file stored in storage |

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

| |
|-----|
| N/A |
|-----|

Response

- Status Code 200 - Returns list of values :

```
{
  "Items": [
    {
      "$metadata": {
        "$type": "Value;1",
        "$modified": "...",
        "$uri": "/v1/collections/test/values/key1"
      },
      "Key": "key1",
      "Data": "data to store",
      "ETag": "\"...\""
    }
  ],
  "$metadata": {
    "$type": "ValueList;1",
    "$uri": "/v1/collections/test/values"
  }
}
```

- Status Code 400 - Empty or invalid collection id or key. Valid characters are a-Z,A-Z,0-9,_ and -.

Security

Type: OpenID Connect

Flow: implicit

Authorization URL: <https://login.microsoftonline.com/crs1testab2c.onmicrosoft.com>

Save value by collectionId and randomly generated key

API that saves a value by collectionId and assigned a randomly generated key.

Permissions

| |
|-----|
| N/A |
|-----|

Http Request

| |
|--------------------------------------------|
| POST /v1/collections/{collectionId}/values |
|--------------------------------------------|

Parameters

| PARAMETER | TYPE | DESCRIPTION |
|--------------|--------|-------------------------------------------------------------|
| collectionId | string | Represents the collection of data or file stored in storage |

Request headers

| HEADER | VALUE |
|---------------|---------------------------|
| Authorization | Bearer {token}. Required. |
| Content-Type | application/json |

Request Body

| |
|-----------------------------------|
| {
"data": "data to store"
} |
|-----------------------------------|

Response

- Status Code 200:

json { "\$metadata": { "\$type": "Value;1", "\$modified": "...", "\$uri":
"/v1/collections/test/values/filename" }, "Key": "filename", "Data": "data to store", "ETag": "\"...\"" } }
- Status Code 400 - Empty or invalid collection id or key. Valid characters are a-Z,A-Z,0-9,_ and -.

Security

Type: OpenID Connect

Flow: implicit

Authorization URL: <https://login.microsoftonline.com/crs1testab2c.onmicrosoft.com>

Update value by collectionId and key

API that saves a value by collectionId and Key.

Permissions

| |
|-----|
| N/A |
|-----|

Http Request

| |
|-------------------------------------------------|
| PUT /v1/collections/{collectionId}/values/{key} |
|-------------------------------------------------|

Parameters

| PARAMETER | TYPE | DESCRIPTION |

```

Ping Status

API that pings the Storage Adapter Service and responds to the status code.

Permissions

N/A

Http Request

GET /v1/status/ping

Request headers

| HEADER | VALUE |
|--------------|------------------|
| Content-Type | application/json |

Request Body

N/A

Response

Responds 200 Status code

Namespace Mmm.Iot.StorageAdapter.WebService.Controllers

Classes

[StatusController](#)

[ValuesController](#)

Class StatusController

Inheritance

System.Object
StatusController

Namespace: [Mmm.Iot.StorageAdapter.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public sealed class StatusController : ControllerBase
```

Constructors

StatusController(IStatusService)

Declaration

```
public StatusController(IStatusService statusService)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|----------------|---------------|-------------|
| IStatusService | statusService | |

Methods

GetAsync()

Declaration

```
public Task<StatusApiModel> GetAsync()
```

Returns

| TYPE | DESCRIPTION |
|---------------------------------------------|-------------|
| System.Threading.Tasks.Task<StatusApiModel> | |

Ping()

Declaration

```
public IActionResult Ping()
```

Returns

| TYPE | DESCRIPTION |
|---------------|-------------|
| IActionResult | |

Class ValuesController

Inheritance

System.Object
ValuesController

Namespace: [Mmm.Iot.StorageAdapter.WebService.Controllers](#)

Assembly: cs.temp.dll.dll

Syntax

```
public class ValuesController : Controller
```

Constructors

ValuesController(IKeyValueContainer, IKeyGenerator, ILogger<ValuesController>)

Declaration

```
public ValuesController(IKeyValueContainer container, IKeyGenerator keyGenerator, ILogger<ValuesController> logger)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------------------------------------|--------------|-------------|
| IKeyValueContainer | container | |
| IKeyGenerator | keyGenerator | |
| ILogger< ValuesController > | logger | |

Methods

Delete(String, String)

Declaration

```
public Task Delete(string collectionId, string key)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|--------------|-------------|
| System.String | collectionId | |
| System.String | key | |

Returns

| TYPE | DESCRIPTION |
|-----------------------------|-------------|
| System.Threading.Tasks.Task | |

Get(String)

Declaration

```
public Task<ValueListApiModel> Get(string collectionId)
```

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|--------------|-------------|
| System.String | collectionId | |

Returns

| TYPE | DESCRIPTION |
|------------------------------------------------|-------------|
| System.Threading.Tasks.Task<ValueListApiModel> | |

Get(String, String)

Declaration

| |
|-----------------------------------------------------------------|
| public Task<ValueApiModel> Get(string collectionId, string key) |
|-----------------------------------------------------------------|

Parameters

| TYPE | NAME | DESCRIPTION |
|---------------|--------------|-------------|
| System.String | collectionId | |
| System.String | key | |

Returns

| TYPE | DESCRIPTION |
|--------------------------------------------|-------------|
| System.Threading.Tasks.Task<ValueApiModel> | |

Post(String, ValueServiceModel)

Declaration

| |
|-------------------------------------------------------------------------------|
| public Task<ValueApiModel> Post(string collectionId, ValueServiceModel model) |
|-------------------------------------------------------------------------------|

Parameters

| TYPE | NAME | DESCRIPTION |
|-------------------|--------------|-------------|
| System.String | collectionId | |
| ValueServiceModel | model | |

Returns

| TYPE | DESCRIPTION |
|--------------------------------------------|-------------|
| System.Threading.Tasks.Task<ValueApiModel> | |

Put(String, String, ValueServiceModel)

Declaration

| |
|------------------------------------------------------------------------------------------|
| public Task<ValueApiModel> Put(string collectionId, string key, ValueServiceModel model) |
|------------------------------------------------------------------------------------------|

Parameters

| TYPE | NAME | DESCRIPTION |
|-------------------|--------------|-------------|
| System.String | collectionId | |
| System.String | key | |
| ValueServiceModel | model | |

Returns

| TYPE | DESCRIPTION |
|--------------------------------------------|-------------|
| System.Threading.Tasks.Task<ValueApiModel> | |
